

# Spendrups Environmental Policy

## Introduction

---

Spendrups and its subsidiaries (“**Spendrups**”) manufacture, source and sell non-alcoholic and alcoholic beverages, accessories, clothing and promotional products. Our environmental impact is partly in our own production and distribution, partly in our value chain when we purchase, among other things, raw materials, packaging and external transportation - but also at the customer level, where our products are used, and our packaging is recycled.

Spendrups brews for future generations and has a long-term perspective on sustainability where the environment is an important cornerstone. We take a long-term approach to preventing negative environmental impact, improving energy and resource efficiency and protecting the environment, including biodiversity.

Spendrup's environmental work aims to contribute to a sustainable society. We strive to exceed environmental legislation including binding requirements and are driven by the desire to continuously reduce the environmental impact through continuous improvements.

## Focus areas

---

Our environmental work focuses on minimizing environmental and climate impact and efficient use of resources with a focus on circularity and life cycle thinking. We strive to:

- reduce climate impacts across the value chain in line with the Paris Agreement
- continuously reduce our emissions to land, air and water
- drive continuous improvements in chemical management and use, striving to exceed current legislation
- where possible, work to promote biodiversity and protect ecosystems
- use circular and climate-smart packaging
- reduce waste and circulate residual streams
- reduce water and energy use
- conduct appropriate waste management and ensure that hazardous waste is properly managed
- in addition, strive to procure environmentally friendly goods and services as much as possible

## Systematic working approach

---

We analyse our environment and our environmental impacts, as well as our environmental risks and opportunities. Based on this analysis, we establish objectives, action programs and procedures to monitor and improve our environmental performance. For external verification of our working methods and our work, we have been ISO-14001 certified since 2012<sup>1</sup>.

## The precautionary principle

---

We will consider the precautionary principle in business decisions and processes to prevent, avoid or mitigate harm or other adverse effects.

## Environmental expertise

---

We will ensure that employees receive sufficient information, training and resources to take responsibility for environmental issues related to their work.

## Transparency

---

We will engage in a dialogue about our environmental performance with our stakeholders and disclose fact-based and authoritative information.
